

# Dataset 3 — Start here

---

## SEAC 2026 workshop — Comparative interpretation

This is a short optional/final exercise. It deliberately introduces **no new major statistical method**.

1. Open `SEAC2026_Circular_Statistics.Rproj`.
2. Open: `01_WORKSHOP/03_Dataset3_Ethno_Comparison_BEGINNER.R`
3. Keep open: `01_WORKSHOP/03_Exercise_Dataset3_Ethno_Comparison.md`
4. Run one numbered section at a time with **Ctrl+Enter**.

The central question is:

What can go wrong if distinct directional traditions are pooled before we look at their subgroup structure?
